

The following list of safety risks is based on the requirements of Regulation (EU) 2023/988 on general product safety (GPSR). The aim is to protect users from potential hazards of inappropriate use. The warnings are worded in a simple and understandable way to be accessible to the general public.

Product category risk analysis: FRIDGE ACCESSORIES

AK 104 – K&M FRIDGE ODOUR REMOVER 1 PC.

AK 160 – FRESH PAD FOR STORING FRUIT AND VEGETABLES

General risks and precautions to prevent the risks:

Before use

Read and follow the instructions on the packaging or added to the packaging.

If you have any questions about the use, contact the manufacturer.

Use accessories for their intended purpose.

Keep the packaging and accessories out of reach of children. Do not leave any parts in places where they can be a tripping hazard.

1. Food contamination

With the fridge odour remover, there is a risk that black particles can spill from the filter, which is normal and not a hazard. Be careful not to let the particles come into contact with food, as it may affect the taste. It is important for the remover not to touch the food directly.

2. Hazards in a humid environment

Accessories based on activated carbon or other absorbent materials can become a place where bacteria and mould accumulate, especially if such accessories are used for a long time. In this case, instead of removing odours, they can become a source of contaminants that affect the safety of food stored in the fridge. Replace the accessories regularly and observe the usage time.

3. Hazards at high temperatures

Store the accessories away from heat sources and direct sunlight.

Only use accessories recommended by the manufacturer.

Why it is important to follow warnings

When you follow the above warnings, you minimise the risk of a hazard occurring. Keep yourself and your loved ones safe and take the recommended precautions.
